Frequency Electronics, Inc. Statement Regarding Conflict Minerals

Frequency Electronics, Inc. takes seriously its responsibility to conduct operations in a socially, ethically, and environmentally responsible manner. We perform a reasonable country-of-origin inquiry and conduct supply chain due diligence in accordance with the framework set forth in the Organization for Economic Cooperation and Development (OECD) Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas.

The U.S. Securities and Exchange Commission's 2012 final rule under Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act requires publicly traded companies to disclose the use of certain conflict minerals—tin, tantalum, tungsten, and gold—in products they manufacture. Frequency Electronics, Inc. is committed to supporting the objectives of this legislation and to using reasonable efforts to ensure that our supply chain does not directly or indirectly finance or benefit armed groups or contribute to human rights abuses in the Democratic Republic of the Congo (DRC) or adjoining countries.

We require our suppliers to undertake reasonable due diligence and request confirmation that the specified metals are sourced either from mines and smelters outside the DRC region, or from facilities that have been certified as "conflict free" by an independent third party.

Frequency Electronics, Inc. will continue to work with its suppliers to promote compliance with DRC conflict-free requirements. If we identify conflict minerals that originate from sources that are not conflict free, we will engage with suppliers to encourage the adoption of appropriate policies, due diligence practices, and management systems related to conflict minerals and to promote these efforts throughout their supply chains.

We are committed to comply with all federal, state, local, and foreign laws, and will provide updated information as it becomes available on our website, www.freqelec.com.
